PERSONAL PROJECTS

1. Covid data portal

- Technologies used - ReactJS , Bootstrap , HTML,CSS , Javascript
- Description - this is a real time project which fetches COVID data across all the countries and shows it on a webpage in tabular form. I have used the API from rootnet API and postman API to fetch data related to COVID-19. All the APIs which I have used are GET APIs which internally use the MoHFW website. Loading support has been provided with the website.
- Website link - [Covid data portal Website](#)
- Git URL - [Covid data portal Github Repo](#)

2. NewsFeed (News website)

- Technologies used - ReactJS , Bootstrap , HTML , CSS , Javascript
- Description - this is a news website .It uses APIs from News API to fetch information related to latest news.The website is categorised to show news related to different subjects (eg.sports,entertainment ,business).pagination support and loading support (with top loading bar) has been added to the website.Due to API restrictions it has to run on local host.
- Git URL - [NewsFeed Github Repo](#)

3. EduTech (Educational Website)

- Technologies used - HTML , CSS , Javascript
- Description - this is a standalone website which uses HTML,CSS and Javascript only.It is a Blog kind of website which shows information related to services provided by educational institutes. It is a prototype website and can be used for commercial purposes.
- Website URL - [EduTech Website](#)
- Git URL - [EduTech Github Repo](#)

4. Text Organizer(Text Editor)

- Technologies used - ReactJS , HTML , CSS , Javascript , Bootstrap
- Description - this is a text editor website which provides functionalities like converting to uppercase,copying text,removing extra spaces and read time.It mainly uses javascript methods like object destructuring.
- Website link - [Text Organize Website](#)
- Git URL - [Text Organizer Github Repo](#)

5. Github Finder

- Technologies used - HTML , CSS , Javascript , Bootstrap
- Description - this is a web application which helps to find github users by its username . It fetches information from Github API and shows user profile,profile image and repos associated with the user.
- Website link - [Github Finder Website](#)
- Git URL - [Github Finder Github Repo](#)
